**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-27, 42-45 and 49, drawn to cyclic ligand and pharmaceutical formulations thereof, classified in class 514, subclass 11.
  - II. Claims 28-41, drawn to therapeutic methods of treatment using a cyclic ligand and pharmaceutical formulations thereof, classified in class 514, subclass 11.
  - III. Claims 46-48, drawn to methods for detection of uPAR using cyclic ligands and pharmaceuticals thereof, classified in class 435, subclass 7.1.
  - IV. Claims 50-52, drawn to methods of protein isolation using a cyclic ligand, classified in class 530, subclass 412.

2. The inventions are distinct, each from the other because:

Inventions of Groups I and II-IV are distinct inventions as product (Group I) and processes of use (Groups II-IV). The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be use in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, as evidenced by the claims themselves, the proteins of Group I can be used in the patentably distinct methods of Groups II-IV (i.e., therapeutic treatments, detection assay, protein isolation method).

The remaining groups (Groups II-IV) are directed to different inventions that are not connected in design, operation, and/or effect. These methods are independent since they are not disclosed as capable of use together, they have different modes of operation, they have different

Art Unit: 1654

functions, and/or they have different effects. One would not have to practice the various methods at the same time to practice just one method alone.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification where indicated, restriction for examination purposes as indicated is proper.

3. In addition, this application contains claims directed to the following patentably distinct species of the claimed invention:

A. The various amino acid sequences encompassed by the claims - e.g., as recited in claim 1.

B. The various linkers from among those claimed - e.g., as recited in claim 6.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species (i.e., Applicant is required to elect a particular amino acid sequence (species A) and a particular linker from among L1-L15 (species B) claimed/disclosed) for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 28, 46, and 50 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the

Art Unit: 1654

limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
